

# **1 APR::Finfo - Perl API for XXX**

## 1.1 Synopsis

```
use APR::Finfo ();
```

META: to be completed

## 1.2 Description

META: to be completed

## 1.3 API

`APR::Finfo` provides the following functions and/or methods:

### 1.3.1 *stat*

META: Autogenerated - needs to be reviewed/completed

get the specified file's stats. The file is specified by filename, instead of using a pre-opened file.

```
$ret = $finfo->stat($fname, $wanted, $cont);
```

- **arg1: \$finfo (APR::Finfo)**

Where to store the information about the file, which is never touched if the call fails.

- **arg2: \$fname (string)**

The name of the file to stat.

- **arg3: \$wanted (string)**

The desired `apr_finfo_t` fields, as a bit flag of `APR_FINFO_` values

- **arg4: \$cont (integer)**

the pool to use to allocate the new file.

- **ret: \$ret (integer)**

### 1.3.2 *pool*

META: Autogenerated - needs to be reviewed/completed

Allocates memory and closes lingering handles in the specified pool

```
$ret = $obj->pool($newval);
```

- **arg1: \$obj (APR::Finfo)**
- **arg2: \$newval (APR::Pool)**

### *1.3.3 valid*

META: Autogenerated - needs to be reviewed/completed

The bitmask describing valid fields of this apr\_finfo\_t structure including all available 'wanted' fields and potentially more

```
$ret = $obj->valid($newval);
```

- **arg1: \$obj (APR::Finfo)**
- **arg2: \$newval (integer)**

### *1.3.4 protection*

META: Autogenerated - needs to be reviewed/completed

The access permissions of the file. Mimics Unix access rights.

```
$ret = $obj->protection($newval);
```

- **arg1: \$obj (APR::Finfo)**
- **arg2: \$newval (integer)**

### *1.3.5 filetype*

META: Autogenerated - needs to be reviewed/completed

The type of file. One of APR\_REG, APR\_DIR, APR\_CHR, APR\_BLK, APR\_PIPE, APR\_LNK or APR SOCK. If the type is undetermined, the value is APR\_NOFILE. If the type cannot be determined, the value is APR\_UNKFILE.

```
$ret = $obj->filetype($newval);
```

- **arg1: \$obj (APR::Finfo)**
- **arg2: \$newval (integer)**

### *1.3.6 user*

META: Autogenerated - needs to be reviewed/completed

### 1.3.7 group

The user id that owns the file

```
$ret = $obj->user($newval);
```

- **arg1: \$obj (APR: :Finfo)**
- **arg2: \$newval (integer)**

### ***1.3.7 group***

META: Autogenerated - needs to be reviewed/completed

The group id that owns the file

```
$ret = $obj->group($newval);
```

- **arg1: \$obj (APR: :Finfo)**
- **arg2: \$newval (integer)**

### ***1.3.8 inode***

META: Autogenerated - needs to be reviewed/completed

The inode of the file.

```
$ret = $obj->inode($newval);
```

- **arg1: \$obj (APR: :Finfo)**
- **arg2: \$newval (integer)**

### ***1.3.9 device***

META: Autogenerated - needs to be reviewed/completed

The id of the device the file is on.

```
$ret = $obj->device($newval);
```

- **arg1: \$obj (APR: :Finfo)**
- **arg2: \$newval (number)**

### ***1.3.10 nlink***

META: Autogenerated - needs to be reviewed/completed

The number of hard links to the file.

```
$ret = $obj->nlink($newval);
```

- **arg1: \$obj (APR::Finfo)**
- **arg2: \$newval (integer)**

### ***1.3.11 size***

META: Autogenerated - needs to be reviewed/completed

The size of the file

```
$ret = $obj->size($newval);
```

- **arg1: \$obj (APR::Finfo)**
- **arg2: \$newval (integer)**

### ***1.3.12 csize***

META: Autogenerated - needs to be reviewed/completed

The storage size consumed by the file

```
$ret = $obj->csize($newval);
```

- **arg1: \$obj (APR::Finfo)**
- **arg2: \$newval (integer)**

### ***1.3.13 atime***

META: Autogenerated - needs to be reviewed/completed

The time the file was last accessed

```
$ret = $obj->atime($newval);
```

- **arg1: \$obj (APR::Finfo)**
- **arg2: \$newval (number)**

### ***1.3.14 mtime***

META: Autogenerated - needs to be reviewed/completed

The time the file was last modified

```
$ret = $obj->mtime($newval);
```

## 1.4 See Also

- **arg1:** `$obj (APR::Finfo)`
- **arg2:** `$newval (number)`

### ***1.3.15 ctime***

META: Autogenerated - needs to be reviewed/completed

The time the file was last changed

```
$ret = $obj->ctime($newval);
```

- **arg1:** `$obj (APR::Finfo)`
- **arg2:** `$newval (number)`

### ***1.3.16 fname***

META: Autogenerated - needs to be reviewed/completed

The pathname of the file (possibly unrooted)

```
$ret = $obj->fname($newval);
```

- **arg1:** `$obj (APR::Finfo)`
- **arg2:** `$newval (string)`

### ***1.3.17 name***

META: Autogenerated - needs to be reviewed/completed

The file's name (no path) in filesystem case

```
$ret = $obj->name($newval);
```

- **arg1:** `$obj (APR::Finfo)`
- **arg2:** `$newval (string)`
